GUIDE: VSME**

VSME

Quick start for maritime:
A simple way for smaller
teams to report on ESG

WHO IS
IT FOR

A complete ESG report

VSME is a complete, credible ESG report for smaller maritime teams outside immediate CSRD scope.

If you later report under other standards, you can reuse the information and evidence from your VSME report.

WHY DOES IT MATTER

Omnibus = pause, not stop

Even when reporting isn't mandatory for you, customers, banks and other stakeholders expect basic ESG data. VSME gives a practical structure to log the essentials without the heavy process.

Our certified sustainability experts can guide you and help you with next steps.

Choose VSME model

Basic Module	Comprehensive Module
<div>Minimum sustainability requirements</div> <div>Most suitable for micro-enterprises</div> <div>Includes key metrics that small businesses should have ready</div>	<div>Includes data likely to be requested by banks or larger customers</div> <div>Suitable for companies preparing for upcoming regulatory changes</div>

GET
STARTED

Basic or Comprehensive?

Choose the **Comprehensive** module if you can.
It gets you further for only a little extra effort, and
makes you more ESG ready.

We support both modules with custom VSME
templates included in Metizoft ESG.

Optional: Run a quick DMA

VSME doesn't require a Double Materiality Assessment (DMA).

If helpful, run a brief DMA to identify relevant, high-impact topics and set priorities. You can start without one and run it later if needed.

WHAT COMES NEXT

Build and publish your report

Share your key data, targets and planned actions in a branded report that shows you take sustainability and transparency seriously.

Collect and track ESG data, then export customised, branded reports with your own text and images.

WHAT COMES NEXT

Start with VSME, scale as needed

When you have established a reporting practice in either VSME module, your data is organised and ready for future requirements and standards.

If your business grows, or the regulations change, you can step it up in the same software without starting over.

OUTCOME

Credibility, not complexity

Stay in control and ahead of coming demands.

By having core ESG data prepared and ready, you prove to customers and other stakeholders that you are future-ready and value sustainability and transparency.
